**INTEGRATED POWER SERVICES SIGNS STOCKING BUILD CENTER AND
MASTER DISTRIBUTOR AGREEMENT WITH FLENDER**

- **Denver service center now stocking build center and Flender Motox Master Distributor for Colorado, Utah, Wyoming, Arizona and southern Montana**

(Greenville, SC—March 23, 2009) Integrated Power Services, a national leader in the service and repair of electric motors and mechanical power transmission components, has signed key service agreement with Flender, an operating unit of Siemens.

IPS Denver is now one of two stocking build centers for Flender Motox in the U.S. The regional service center is also the Flender Motox Master Distributor for Colorado, Utah, Wyoming, Arizona and southern Montana. Flender Motox has a large installed base in the Denver area and Western part of the U.S. and is a leader in a large, nationwide gearmotor and reducer market—estimated at approximately \$400 million-plus a year and supporting a substantial replacement business.

According to Larry Tygart Sr., IPS Denver Regional Service Center Manager, the IPS commitment includes dedicated resources, to provide quotes in ten to fifteen minutes. “We can handle a wide range of gear motors and reducers, from small to large, complicated units,” Tygart said. “Plus we’re building locally, so deliveries should be quicker than normal replacements from the manufacturer.”

IPS will also supply Flender Motox to local, regional and national distributors. The company’s Flender Motox line includes the following gear motors and units:

- Helical up to 177,000 in. lbs./200HP /0.06 to 1306 RPM
- Bevel Helical up to 177,000 in. lbs./200HP /0.06 to 367 RPM
- Parallel Shaft up to 177,000 in. lbs./200HP /0.06 to 440 RPM
- Helical Worm up to 14,000 in. lbs./20HP /0.05 to 178 RPM
- Special drives for agitator, cooling tower, mixer & extruder applications

John Covington, IPS Senior Vice President for Marketing, describes the new Flender agreement as important new “speed to market” advantages for IPS customers. “These new Flender agreements add to our rapid-response capabilities,” he said. “We never stop looking for new ways to deliver reliability faster, whether that means repairs, reconditioning or replacement. It’s something that matters to companies that measure downtime in dollars.”

About Integrated Power Services

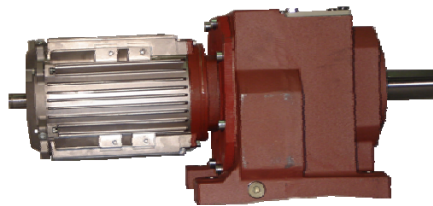

Headquartered in Greenville, South Carolina, IPS is a national leader in the service and repair of electric motors and mechanical power transmission components, with over 2,000 customers across a range of capital-intensive industries. IPS has sixteen regional service centers across the U.S., offering industry-specific experience, deep technical resources and capabilities, and 24/7 dependability on a local, regional and national basis. As an independent power services company, IPS also offers replacement sales and installation services for OEMs. Additional information is available online at www.integratedps.com.
